

VersaPicker

The VersaPicker is a high speed pick and place robotic solution. It can be configured with an integrated vision system to locate and orient products as well as perform vision inspection for quality control.

The solution can be a single, dual or multiple robots based on the required throughput. The dual VersaPicker shown above can easily reach over 200 picks / minute with vision product location and conveyor tracking.

Benefits

- *Speeds over 200 picks/min*
- *Eliminates labor*
- *Integrated Vision System*
- *Proven, reliable Adept platform*
- *Minimal floor space requirements*
- *Low maintenance requirements*
- *Intuitive operating panel*
- *Easy to Operate and Maintain*
- *Single or multiple robots*
- *Easily adapted to changing product line*
